

THE ORIGINAL

# DICK-O-Meter

How big is your best friend really?

At GayRomeo we're often asked what the dick sizes S, M, L, XL & XXL you can read in user profiles really mean. Of course what they really mean is hard to say. Some countries measure in inches, others in centimeters - it's a real global mess. That's why we've cooked up this handy Dick-O-Meter which shouldn't be missing from any self-respecting gay household!

What **GayRomeo.com** also has to offer you

- > A laid-back online gay community with thousands of members online
- > Unlimited messages & profile viewings
- > Networks of friends, special interest clubs & powerful search engine
- > Loads of Dick-O-Meter-certified photos! :-)

more info at <http://DICKOMETER.GAYROMEO.COM>

Caution! Edges can be very sharp. Use carefully to avoid injuries!

USE THIS FLYER AT YOUR OWN RISK!

It's as simple as pie!

**Step 1: Get in the Mood**  
Think horny, get nasty, get it on! :-)

**Step 2: Measure the Length**  
Place Point (A) of the flyer at the base of your dick and check which zone the tip reaches (no stretching!).

**Step 3: Measure the Circumference**  
Starting with Point (B) wrap the flyer round the thickest part of your hot rod and see which color appears in the little glory hole.

**Step 4: Calculate Definitive Size**  
The color you see thru the glory hole helps set the real size. If you see green, up your size by one category. Light blue means no change. Red means down your size by one.
